

Candidate R043

Synthetic candidate profile

EMPLOYMENT HISTORY

Junior Backend Engineer | Elm City Financial Services | 2024-01 to Present

Developing microservices for a local financial firm; implementing caching strategies and API versioning to support legacy clients. Collaborating with senior engineers to optimize SQL queries and improve observability.

IT Support Technician | Family-Owned Hardware Store | 2023-05 to 2023-12

Managed point-of-sale systems and network troubleshooting; wrote scripts to automate inventory reports, gaining exposure to backend logic.

SKILLS

SQL optimization; Backward compatibility; API versioning; OAuth2; Data serialization; Microservices architecture; Observability; Caching strategies; Authentication and authorization; GCP; Node.js; Python; Go; Kafka; PostgreSQL; TypeScript

EDUCATION

Bachelor of Science | Computer Science | Howard University

2019-09 to 2023-06

PROJECTS

Real-Time Transaction Processing System

Built a Kafka-based streaming pipeline for processing financial transactions; integrated OAuth2 for secure access, ensured backward compatibility with existing APIs. Technologies used: GCP, Node.js, PostgreSQL.

Microservices Migration Demo

Refactored a monolith into microservices, focusing on data serialization with Avro; implemented caching strategies using Redis. Technologies used: Python, Go, PostgreSQL.

CERTIFICATIONS

Google Cloud Professional Cloud Architect

Issued by Google.
