

Candidate R044

Synthetic candidate profile

EMPLOYMENT HISTORY

Data Engineering Manager | William S. Hart Union High School District | 2020-06 to Present

Leading a team of three data engineers, I oversee the district's data platform, including the data lake and ELT pipelines. I manage the budget for data infrastructure and work with academic and administrative stakeholders to ensure data governance and quality across all systems.

Senior Data Engineer | Los Angeles County Office of Education | 2017-03 to 2020-05

I designed and built data pipelines ingesting student information from dozens of school districts, implementing change data capture to keep the data lake in sync. I also led the migration of on-premise workflows to Google Cloud Dataflow and improved query performance significantly with tuning.

Data Engineer | Entertainment Data Services | 2014-01 to 2016-12

At this media analytics firm, I developed and maintained ELT pipelines for audience measurement data, using Spark and Databricks. I also collaborated with data scientists to transform raw clickstreams into structured datasets for analysis.

Data Analyst | Santa Clarita Community College District | 2012-08 to 2013-12

I provided reporting and analysis on student enrollment and retention, and I began to build my skills in SQL and Python. This role gave me a solid foundation in understanding the educational data landscape.

Junior Data Engineer | Media Metrics Inc. | 2011-06 to 2012-07

I started my career building and maintaining data pipelines for streaming media analytics. I worked on data quality testing and learned about schema design and metadata management on the job.

SKILLS

Schema design; Data lake architecture; Data quality testing; Change data capture; Data governance; Query tuning; ELT pipeline development; Scala/Spark development; Metadata management; Data transformation; Data modeling; Java; Python; Redshift; Google Cloud Dataflow; Databricks; Apache Airflow; PostgreSQL

EDUCATION

Bachelor of Arts | Computer Science | Pomona College

2007-09 to 2011-06

PROJECTS

Unified Data Lake for K-12 Analytics

Architected and implemented a centralized data lake consolidating student, staff, and financial data from multiple silos. Integrated change data capture and metadata management to ensure data governance and quality. Technologies used: Google Cloud Dataflow, Python, Apache Airflow.

Real-time Attendance Monitoring

Built a streaming pipeline using change data capture to track student attendance in real-time, allowing early intervention for chronic absenteeism. Reduced data latency from daily to minutes. Technologies used: Scala, Apache Spark, Redshift.

CERTIFICATIONS

Google Professional Data Engineer

Issued by Google.

2019-01
