

Candidate E002

Synthetic candidate profile

EMPLOYMENT HISTORY

Junior Python Developer | Palmetto Health IT | 2023-06 to Present

Developing and maintaining RESTful APIs for internal health data systems using Flask, Celery for async tasks, and MySQL. Implemented CI/CD pipelines with Jenkins and containerized microservices with Kubernetes for on-prem deployment.

Graduate Research Assistant | University of South Carolina | 2022-08 to 2023-05

Developed Python scripts for processing medical imaging data, optimized pipelines for concurrent processing using multiprocessing and GIL considerations, and maintained version-controlled codebase.

Software Development Intern | IT Ukraine | 2022-05 to 2022-08

Assisted in developing web applications with Django for clients in the healthcare sector, performed code reviews, and wrote unit tests. Configured Jenkins jobs for continuous integration.

SKILLS

Virtual environments; Flask; Django; Code review; Version control; Linux command line; Debugging; Celery; Concurrency; GIL; Type hints; RESTful APIs; Jenkins; PyCharm; Kubernetes; Docker; Git; Bash scripting; SQL

EDUCATION

Master of Science | Computer Science | University of South Carolina

2022-09 to 2024-06

Bachelor of Science | Software Engineering | National Technical University of Ukraine

2017-09 to 2021-06

PROJECTS

Automated CI/CD Pipeline for Healthcare App

Designed a Jenkins pipeline to build, test, and deploy a Flask-based patient portal to Kubernetes clusters, reducing deployment time by 60% and improving system reliability. Technologies used: Docker.

Asynchronous Task Processing Engine

Implemented a Celery-based task queue for processing medical records in parallel, leveraging concurrency and handling GIL limitations with multiprocessing to achieve 3x throughput. Technologies used: Python, Redis.

CERTIFICATIONS

PCEP – Certified Entry-Level Python Programmer

Issued by Python Institute.

2021-01
