

Candidate P014

Synthetic candidate profile

EMPLOYMENT HISTORY

Principal Frontend Engineer | Treasure Valley Community Credit Union | 2022-03 to Present

Leading the design system initiative, I've built a comprehensive component library in React and Next.js that serves our online banking suite. I also mentor a small team of frontend engineers, balancing hands-on development with architectural guidance.

Lead Frontend Engineer | Intermountain Community Bank | 2018-06 to 2022-02

Transitioned from senior engineer to lead, where I managed a team of four frontend developers and owned the component library roadmap. I drove the adoption of TypeScript and improved test coverage with Cypress, cutting production bugs by a third.

Senior React Developer | Idaho Trust & Savings | 2014-01 to 2018-05

As a senior engineer, I led the migration of our legacy web apps to React and established the initial component library using Storybook. I also collaborated with UX designers to ensure responsive design patterns across our digital channels.

React Developer | Gem State Financial Services | 2011-02 to 2013-12

Developed interactive loan application forms and customer dashboards using React and Node.js, improving the digital experience and reducing form completion time.

Junior React Developer | Boise Valley Credit Union | 2008-06 to 2011-01

Started my career building and maintaining React components for the credit union's online banking portal, learning best practices under senior developers.

SKILLS

Next.js; Responsive Design; TypeScript; Cypress; Component Architecture; Hooks; React; Node.js; Storybook; npm; AWS; ESLint; GitHub Actions; JavaScript; CSS

EDUCATION

Bachelor of Science | Computer Science | Boise State University

2004-09 to 2008-06

PROJECTS

Design System Component Library

Created a comprehensive library of accessible, responsive React components with Storybook documentation, used across multiple banking products. Technologies used: TypeScript, Next.js.

CI/CD Pipeline Implementation

Set up GitHub Actions workflows for automated linting, testing with Cypress, and deployment to AWS, reducing release cycles from weeks to days. Technologies used: Node.js.

CERTIFICATIONS

AWS Certified Developer – Associate

Issued by Amazon Web Services.

2020-01
