

Candidate P061

Synthetic candidate profile

EMPLOYMENT HISTORY

DevOps Engineer | AgroTech Solutions | 2022-08 to Present

Architect and implement robust disaster recovery and high availability solutions, ensuring business continuity through comprehensive backup and restore procedures and infrastructure testing. Collaborate cross-functionally to roll out immutable infrastructure patterns, enhancing security hardening and compliance across multi-cloud environments.

Junior DevOps Engineer | CloudWave Systems | 2020-06 to 2022-07

Managed Kubernetes cluster administration and CI/CD pipeline design, leveraging Terraform and Ansible for infrastructure as code. Played a key role in outage mitigation and rollback strategies, ensuring service mesh implementation did not disrupt production traffic.

DevOps Engineer | AgroTech Solutions | 2019-01 to 2020-05

Supported cloud platform management and automation initiatives. Designed backup and restore procedures that became the company standard, while contributing to security hardening and compliance audits.

SKILLS

Infrastructure testing; Immutable infrastructure; Release management and rollback strategies; Container orchestration; Scripting and automation; Security hardening and compliance; Kubernetes cluster administration; Backup and restore procedures; Service mesh implementation; Cloud platform management; CI/CD pipeline design; Ansible; Azure; AWS; Kubernetes; Terraform; Python; Bash; Docker

EDUCATION

Bachelor of Science | Computer Science | California State University, Monterey Bay

2016-09 to 2018-06

Associate of Science | Computer Science | Hartnell Community College

2014-09 to 2016-06

PROJECTS

Automated Disaster Recovery Drill

Developed a fully automated disaster recovery drill system using Terraform and Ansible, reducing recovery time from hours to minutes. Implemented infrastructure testing to validate RTO and RPO, and integrated with CI/CD pipelines for continuous readiness. Technologies used: AWS, Kubernetes.

Service Mesh Migration

Led the migration of a microservices architecture to a service mesh implementation, utilizing Istio on Kubernetes. Ensured zero-downtime during migration and implemented security policies for mTLS and traffic management. Technologies used: Azure, Terraform.

CERTIFICATIONS

AWS Certified DevOps Engineer – Professional

Issued by Amazon Web Services.

2023-01

CKA: Certified Kubernetes Administrator

Issued by Cloud Native Computing Foundation.

2021-01
