

Candidate P075

Synthetic candidate profile

EMPLOYMENT HISTORY

Backend Engineer | NonProfit Tech Solutions | 2023-08 to Present

Lead backend development for donor management platform; implemented rate limiting and idempotent APIs to handle high-volume donations. Optimized SQL queries reducing response times by 40%.

Security Engineer (Contract) | DevSecOps Consulting | 2022-06 to 2023-07

Implemented authentication and authorization using JWT for client projects. Set up message queues with RabbitMQ for secure data processing.

Junior Backend Developer | Tech Startup Incubator | 2021-01 to 2022-05

Developed microservices with Node.js and MongoDB. Worked with Kubernetes for deployment and Terraform for infrastructure as code.

SKILLS

Load balancing; SQL optimization; Rate limiting; Message queues; Idempotency; GraphQL; JWT; Integration testing; Authentication and authorization; MySQL; Git; RabbitMQ; MongoDB; Kubernetes; Node.js; Terraform; AWS; Docker

EDUCATION

Bachelor of Science | Computer Science | University of Oregon

2016-09 to 2020-06

Certificate | Full Stack Web Development | Coding Dojo

2020-09 to 2020-06

PROJECTS

Secure API Gateway

Designed a rate-limited API gateway with authentication, using JWT and Redis for token storage. Technologies used: Node.js.

CERTIFICATIONS

AWS Certified Solutions Architect

Issued by Amazon Web Services.

2023-01
