

Candidate P125

Synthetic candidate profile

EMPLOYMENT HISTORY

Software Engineering Intern | University of North Texas | 2024-06 to 2024-08

Collaborated with the financial services team to assist in integrating payment gateway APIs for campus transactions, gaining hands-on experience with transaction lifecycle management and webhook handling.

Research Assistant | University of North Texas | 2024-01 to 2024-05

Supported a research project on fraud detection methodologies in digital payments, analyzing transaction datasets and implementing prototype models with Python and SQL.

Student Worker - IT Help Desk | University of North Texas | 2023-05 to 2023-12

Provided technical support for students and staff, troubleshooting hardware and software issues, and gained foundational knowledge in incident response and user support.

SKILLS

Transaction lifecycle management; Payment gateway integration; ACH; Fraud detection and prevention; Chargebacks and disputes; Webhooks; Caching strategies; PostgreSQL; Plaid; Spreedly; Bambora; Settlement and reconciliation; Incident response; Digital wallets

EDUCATION

Bachelor of Science | Computer Science | Austin College

2021-09 to 2025-06

PROJECTS

Payment Gateway Sandbox Integration

Developed a mock e-commerce platform integrating Bambora and Spreedly sandbox APIs to simulate transaction flows, handle webhooks, and manage refunds. Technologies used: Python, Flask, PostgreSQL.

ACH Payment Processor Simulation

Built a command-line tool to model ACH transaction processing, including settlement and reconciliation, using Plaid-like APIs for bank account verification. Technologies used: Python, SQLite.

Fraud Detection ML Model

Trained a machine learning model on synthetic transaction data to identify potential fraudulent activities, implementing basic caching to handle large datasets efficiently. Technologies used: Python, scikit-learn, Pandas, Redis.
