

Candidate P143

Synthetic candidate profile

EMPLOYMENT HISTORY

Lead Machine Learning Engineer | Midwest Distribution Networks | 2018-06 to Present

Spearheading the development and deployment of predictive analytics solutions that optimize route efficiency and inventory forecasting. Leveraging advanced machine learning models, including reinforcement learning, to drive continuous improvement and operational excellence.

Senior Machine Learning Engineer | Great Lakes Fulfillment Services | 2014-03 to 2018-05

Architected and deployed recommender systems for internal logistics optimization, significantly enhancing cross-docking operations. Collaborated with cross-functional teams to integrate MLflow and Kafka pipelines, ensuring robust model monitoring and real-time data streaming.

Machine Learning Engineer | Badger State Freight Co. | 2012-01 to 2014-02

Developed predictive maintenance models for fleet vehicles using LightGBM and feature engineering techniques, resulting in reduced downtime and cost savings. Gained hands-on experience with cloud platforms like AWS and Azure for model deployment.

Junior Data Analyst | Central Insurance Group | 2008-06 to 2011-12

Provided analytical support for claims processing and risk assessment. Led efforts to restructure data reporting, showcasing an early aptitude for translating raw data into actionable insights.

SKILLS

Model Deployment; Python; Recommender Systems; LightGBM; Model Evaluation; Feature Engineering; Reinforcement Learning; MLflow; Apache Kafka; Azure; AWS; Jupyter; Git; Data Engineering; MLOps

EDUCATION

Associate of Science | Computer Science | Madison College

2005-09 to 2007-06

Bachelor of Science | Computer Science | University of Wisconsin-Madison

2007-09 to 2009-06

Master of Science | Data Science | University of Wisconsin-Madison

2016-09 to 2018-06

PROJECTS

Dynamic Route Optimization

Developed a reinforcement learning model to optimize delivery routes in real-time, considering traffic and weather, saving 15% in fuel costs. Technologies used: Python, Apache Kafka, Azure.

Predictive Inventory System

Built a LightGBM-based system to forecast inventory demand across multiple warehouses, achieving 95% accuracy and reducing stockouts. Technologies used: Python, AWS, MLflow.

CERTIFICATIONS

TensorFlow Developer Certificate

Issued by Google.

2019-01

AWS Certified Machine Learning – Specialty

Issued by Amazon Web Services.

2020-01
