

Candidate P155

Synthetic candidate profile

EMPLOYMENT HISTORY

Machine Learning Engineer | Precision Manufacturing Solutions | 2023-01 to Present

Deploying NLP models for maintenance logs analysis. Built pipelines to monitor sensor data using time series analysis and anomaly detection. Improved model accuracy by 15% through hyperparameter tuning.

Data Analyst | Precision Manufacturing Solutions | 2021-06 to 2022-12

Analyzed production data using R and Tableau to identify inefficiencies. Introduced basic anomaly detection for quality control, leading to reduction in defects.

Quality Control Technician | Precision Manufacturing Solutions | 2019-01 to 2021-05

Performed inspections and collected data on production lines. Started using Python (Pandas) to automate reporting and gain insights.

SKILLS

Model Evaluation; Hyperparameter Tuning; TensorFlow; R; Time Series Analysis; Anomaly Detection; Hadoop; Big Data Technologies; Airflow; Tableau; Jupyter; Pandas; Kubeflow

EDUCATION

Certificate | Data Analytics | Everett Community College

2017-09 to 2018-06

PROJECTS

NLP for Maintenance Logs

Developed a text classification model to categorize failure modes from maintenance records. Used TensorFlow and implemented model evaluation to achieve F1 score of 0.87. Technologies used: Pandas, Jupyter.

CERTIFICATIONS

TensorFlow Developer Certificate

Issued by TensorFlow.

2023-01
