

Candidate P182

Synthetic candidate profile

EMPLOYMENT HISTORY

Junior Fintech Engineer | Delta Financial Systems | 2021-06 to 2023-08

Developed and maintained cloud-native payment processing services, integrating tokenization and API security measures. Assisted in building fault-tolerant transaction systems and automated reconciliation workflows.

Fintech Engineer | Meridian Core Banking Solutions | 2023-09 to Present

Design and implement low-latency core banking modules, focusing on regulatory reporting and fraud detection. Collaborate with cross-functional teams to ensure PCI DSS compliance and optimize system performance using Kubernetes and Grafana.

SKILLS

fault-tolerant system design; payment gateway integration; API security; tokenization; system reconciliation; smart contract development; PCI DSS compliance; fraud detection algorithms; risk management systems; distributed ledger technology; low-latency programming; regulatory reporting; Java; Go; Python; C++; Docker; Rust; SQL

EDUCATION

Certificate in Full Stack Web Development | Computer Science | Community College of Shreveport

2019-09 to 2020-06

Certificate in Fintech Engineering | Fintech | Online Bootcamp

2020-09 to 2021-06

PROJECTS

Peer-to-Peer Lending DApp

Built a decentralized lending platform using smart contracts on Ethereum, implementing tokenization and ensuring transaction integrity. Technologies used: Solidity, Node.js, React.

Real-time Fraud Detection System

Developed a fraud detection algorithm using machine learning models in Python, integrated with a monitoring dashboard. Technologies used: TensorFlow, Grafana, Kafka.

CERTIFICATIONS

Certified Blockchain Professional (CBP)

Issued by Blockchain Council.

2022-01
